

CALABAZA HALLOWEEN

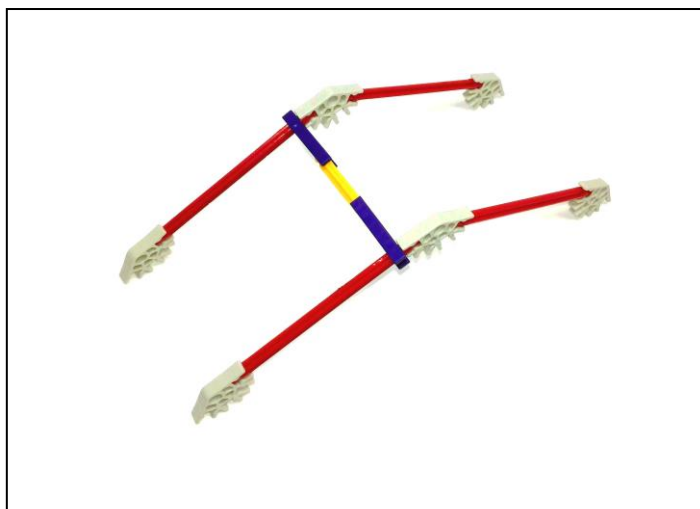

Comenzamos haciendo la base y la estructura principal de la calabaza.

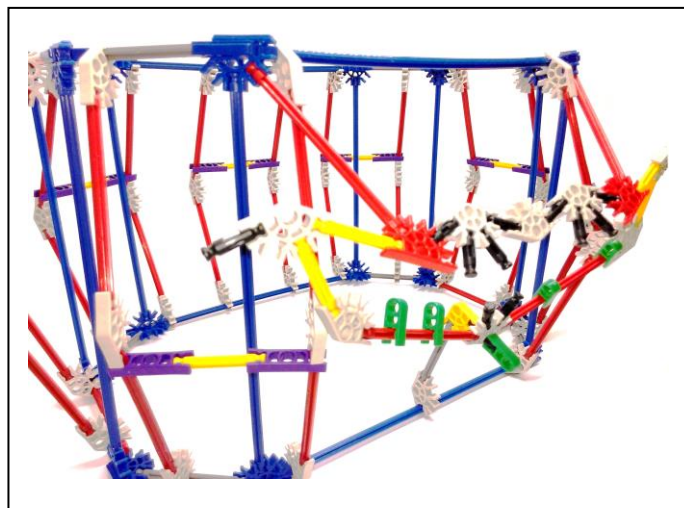

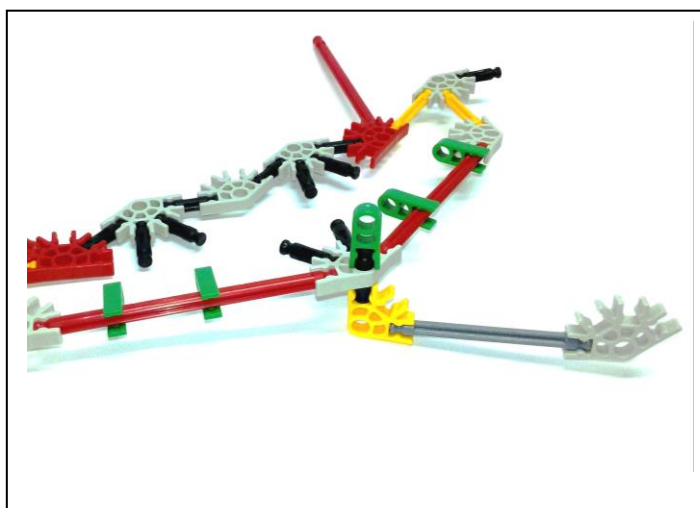

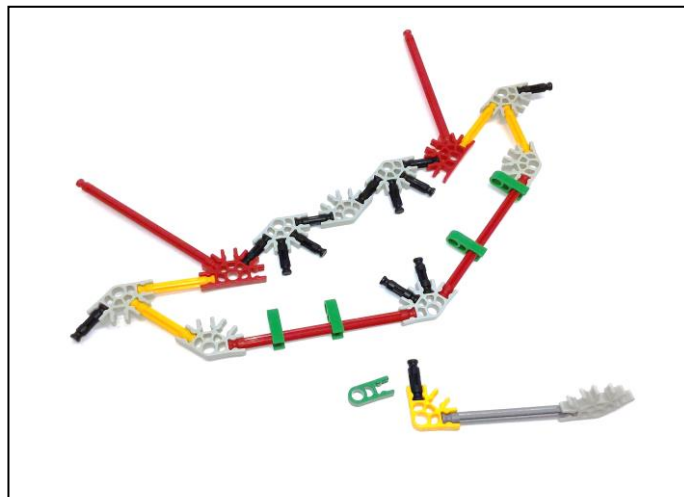

Seguimos haciendo el cuerpo de la calabaza para darle forma ovalada.

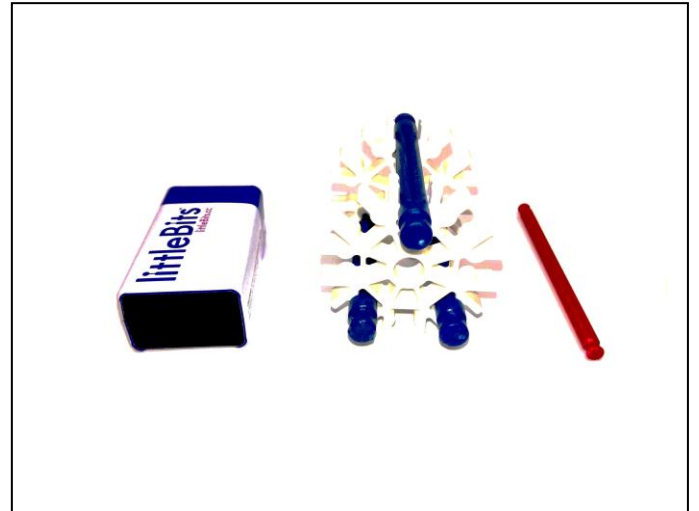

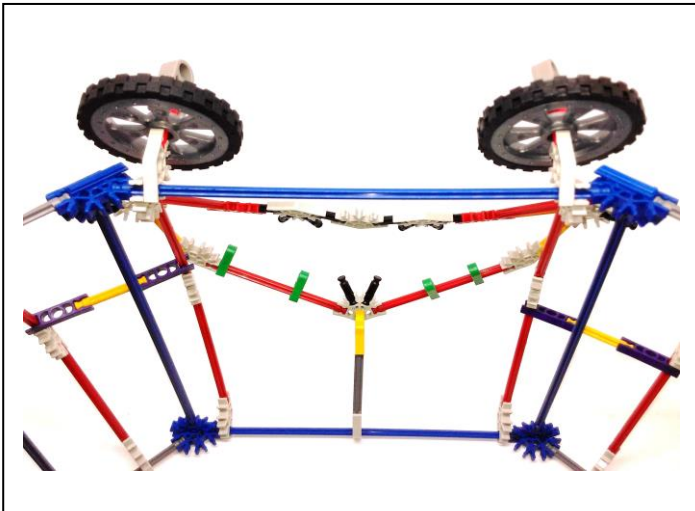

Cuando hayamos creado los 7 arcos, los colocamos en la estructura principal.

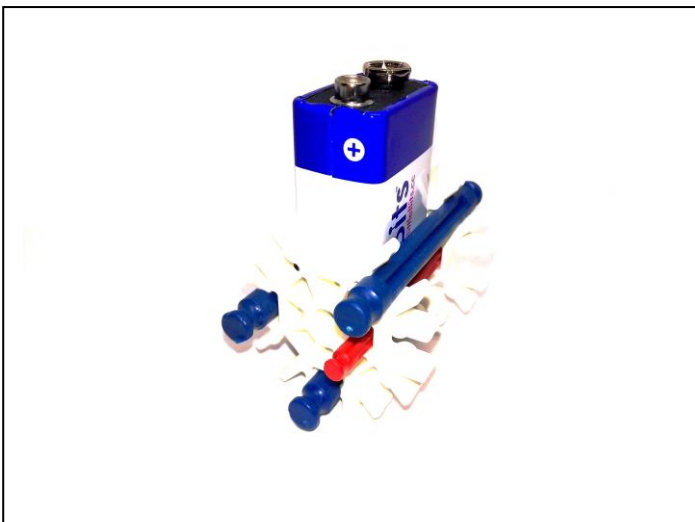

Continuamos con la creación de esta iboca terrorífica!

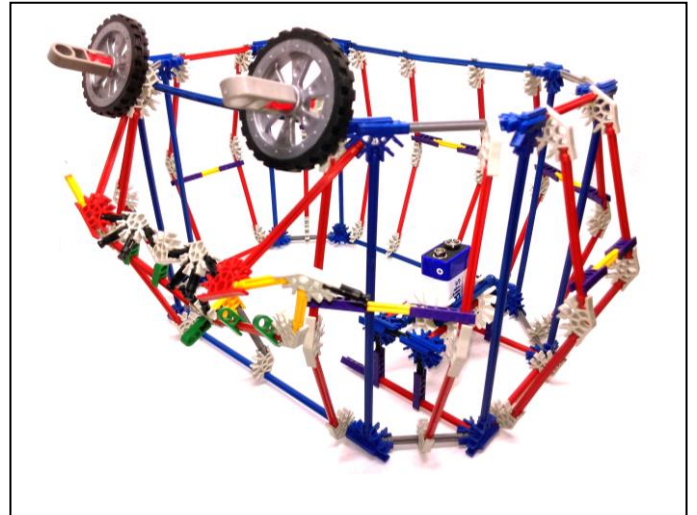

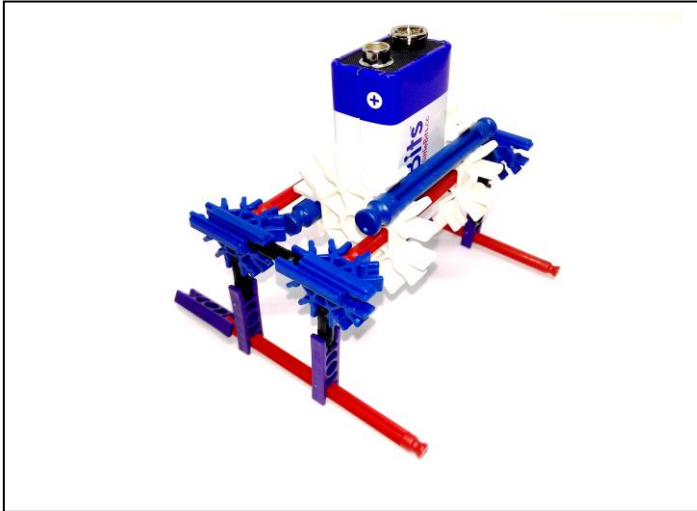

Seguimos con el montaje de los ojos

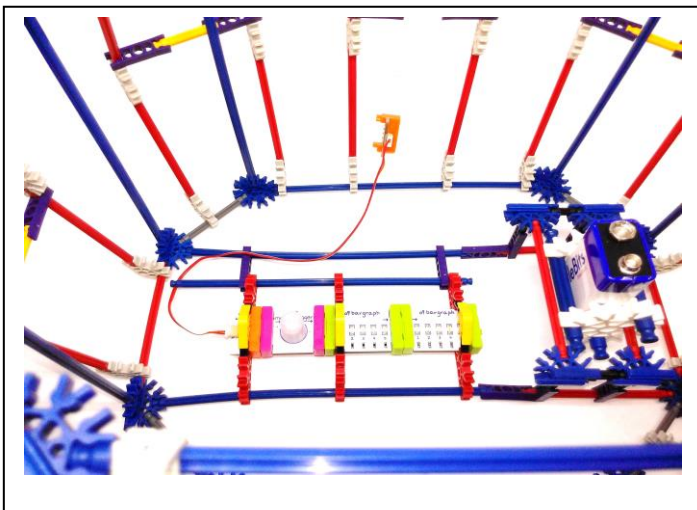

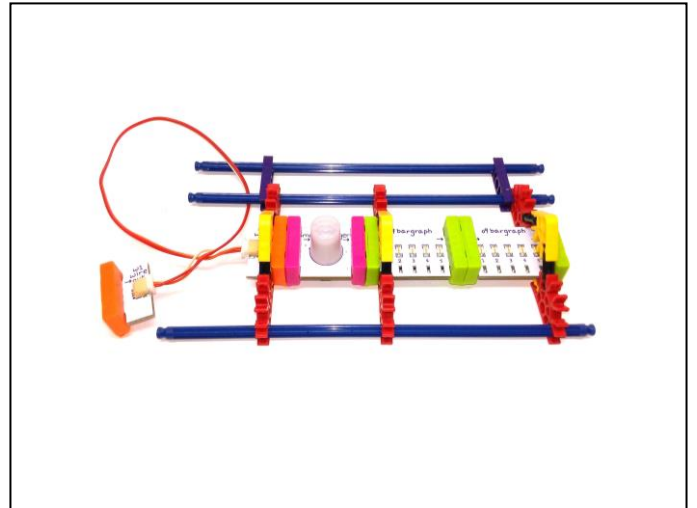

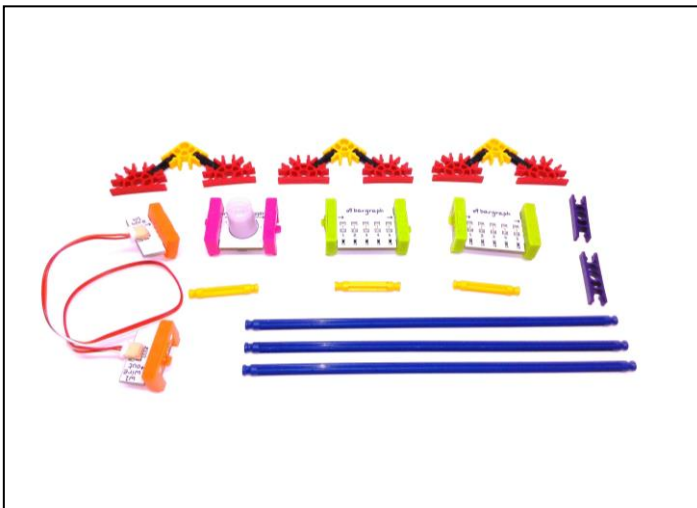

Montamos el anclaje de sujeción de la pila y lo acoplamos a la siguiente estructura.

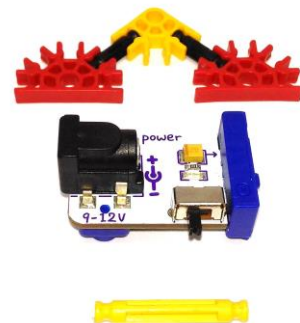

Una vez creada la sujeción de la pila, la acoplamos en el interior de la calabaza.

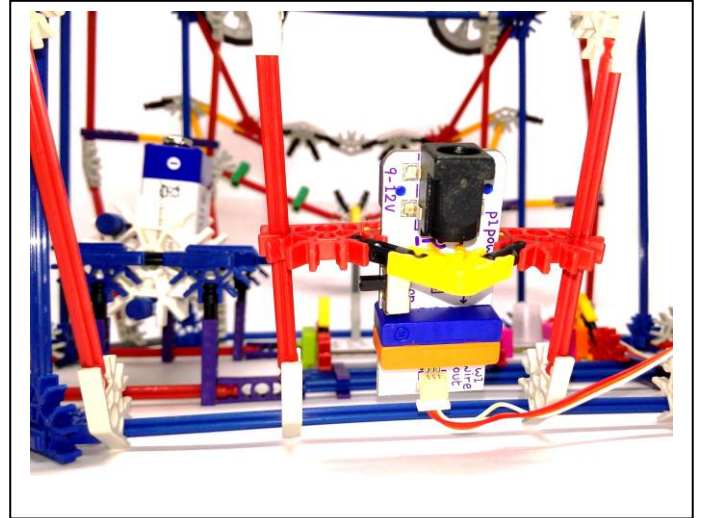

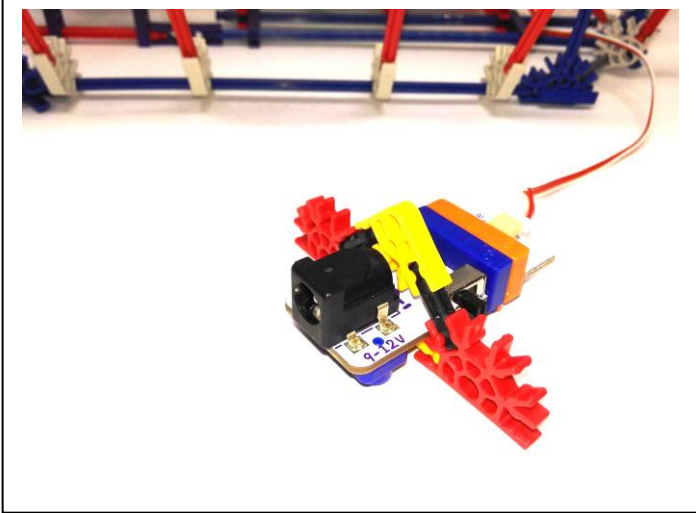

Procedemos a encajar los littleBits en la sujeción.

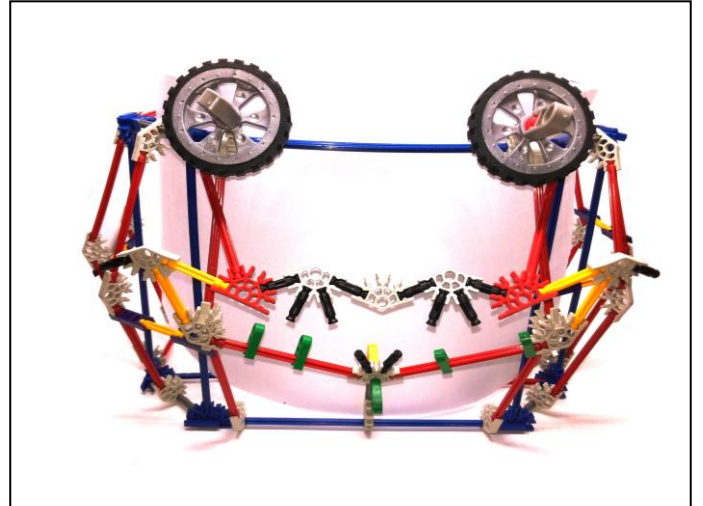

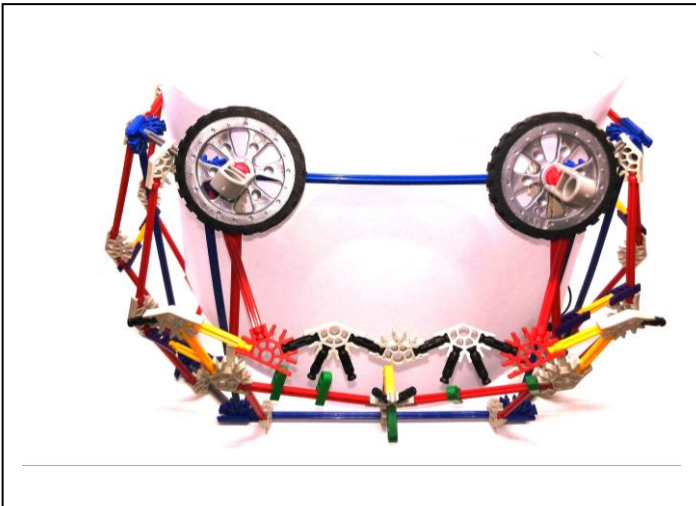

Sujetamos el littleBits power

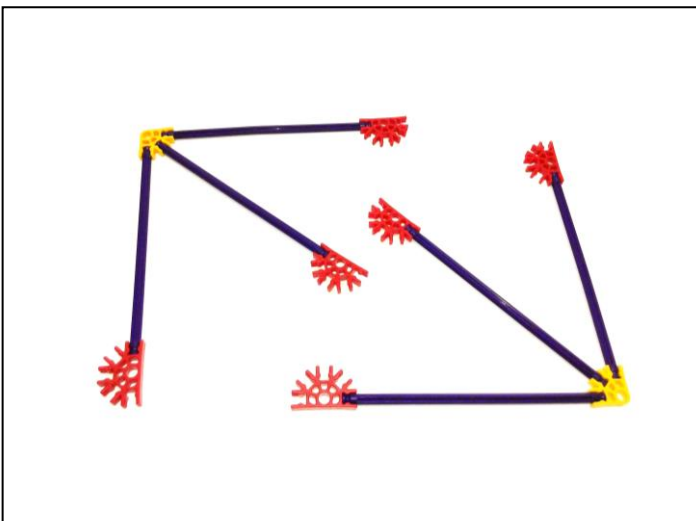

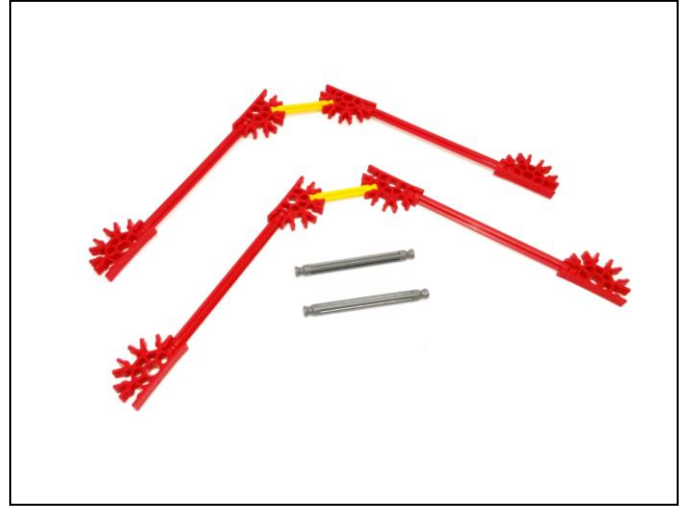

Introducimos 2 folios A4, uno en la parte delantera y otro en la trasera.

Continuamos creando la parte superior de la calabaza.

Una vez finalizado, ¡¡este es el resultado!!!
Puedes probar a modificar o cambiar los littleBits .
