Ésta será la base del cofre.

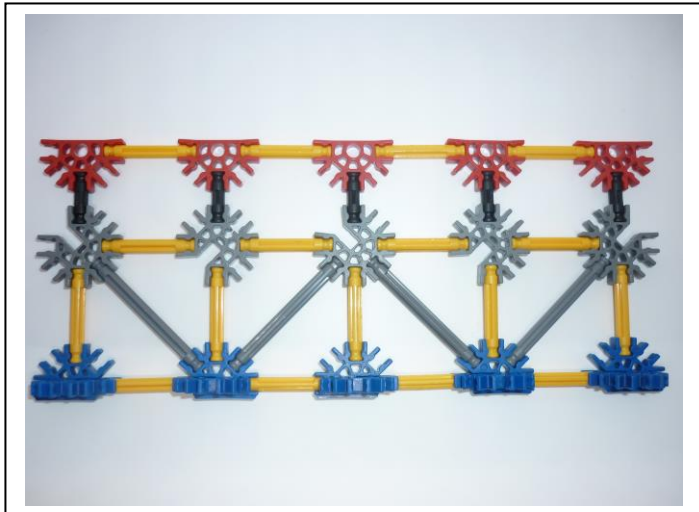

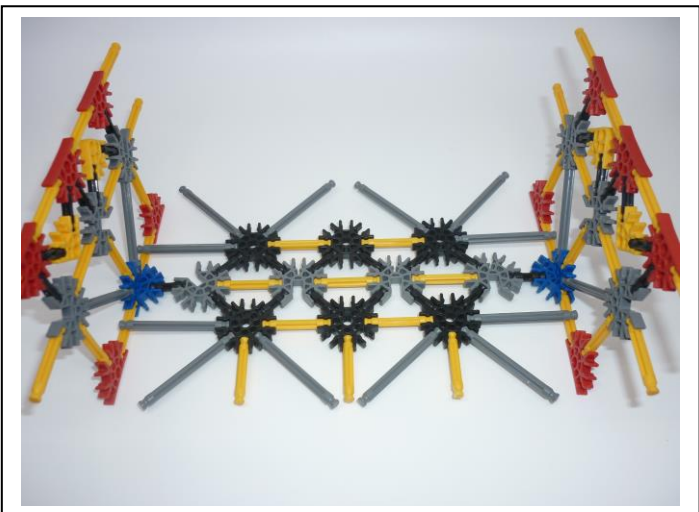

Los laterales. Hacemos 2.

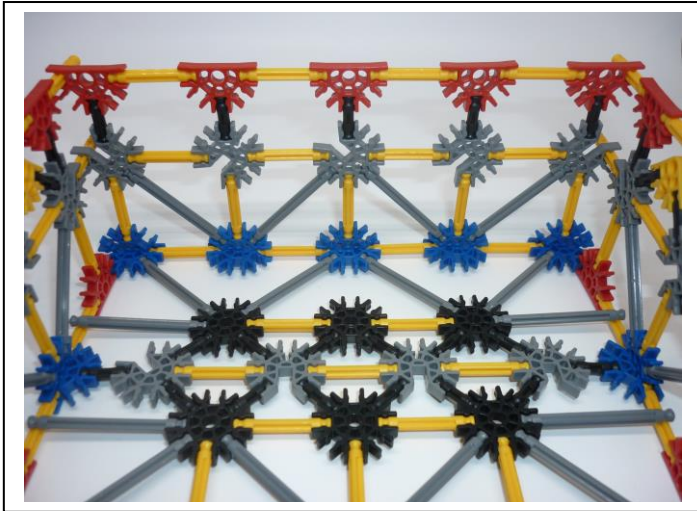

Unimos los laterales a la base.

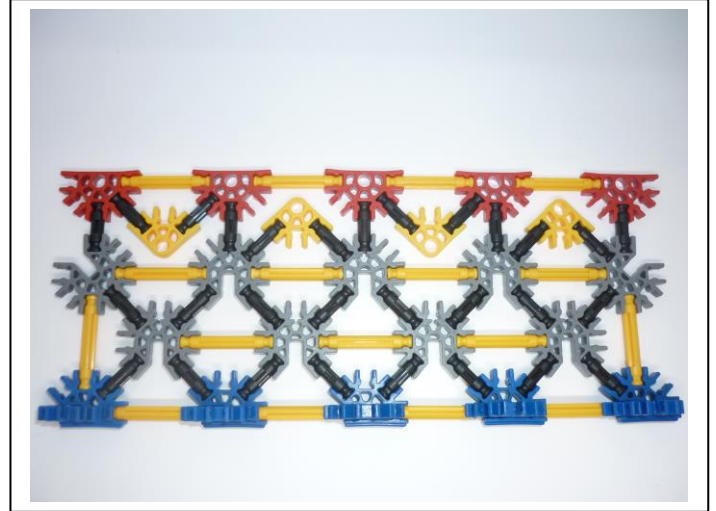

La parte trasera.

Colocamos la parte trasera.

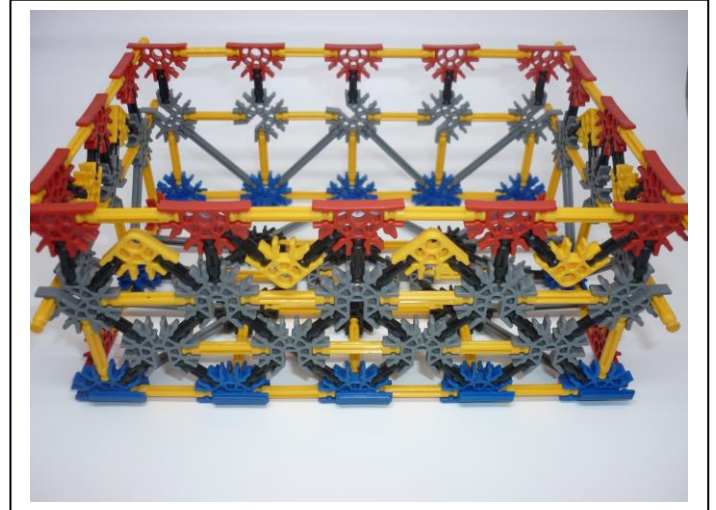

La parte delantera.

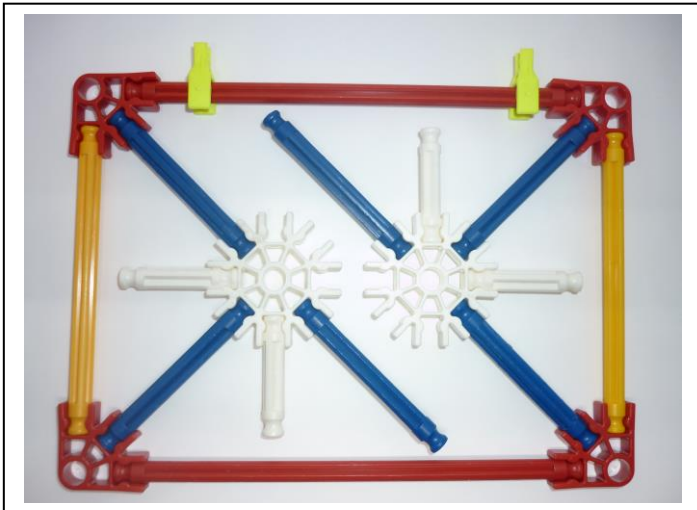

Colocamos la parte delantera.

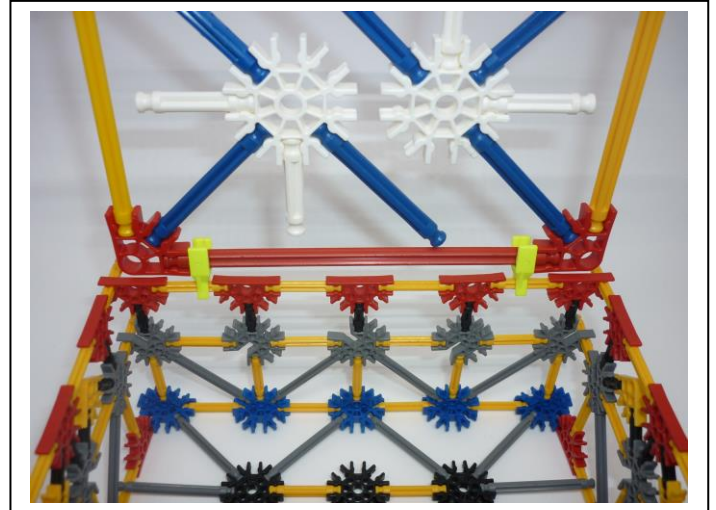

Así nos está quedando.

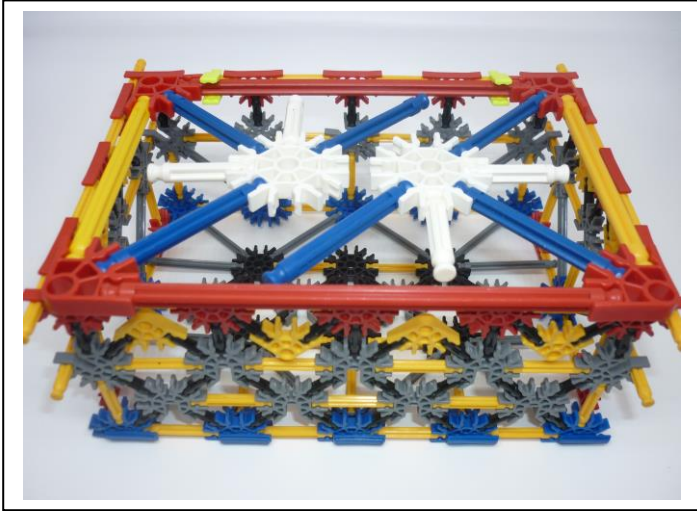

La parte superior o tapa.

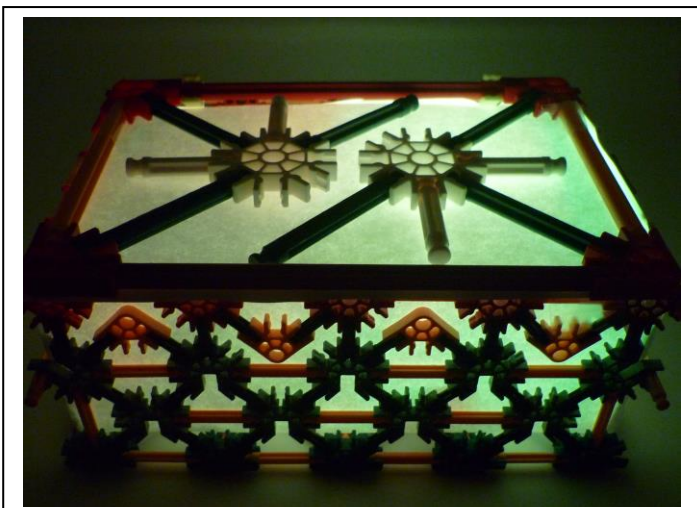

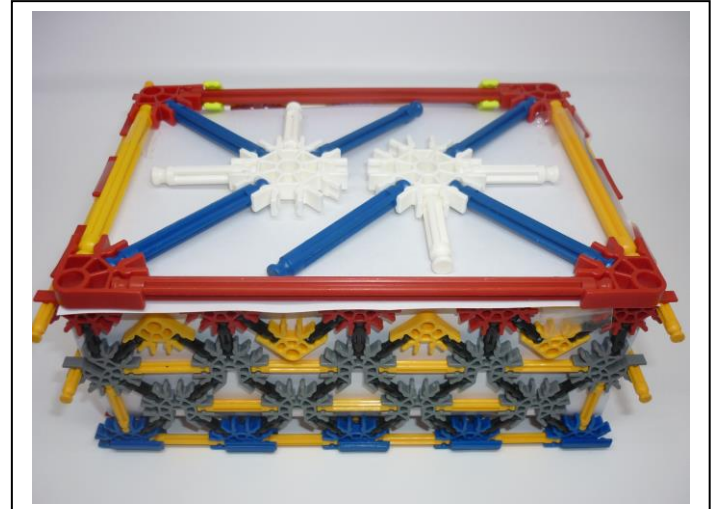

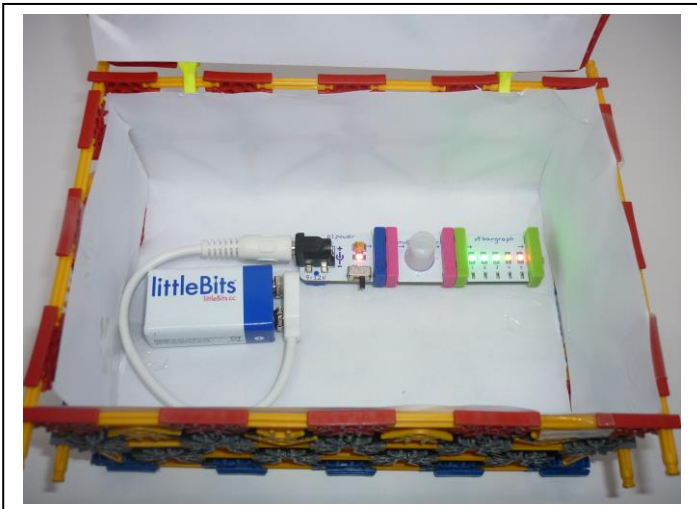

La tapa se conecta a la parte trasera.

Recubrimos el interior del cofre y la cara interna de la tapa con papel. Podemos usar fixo para sujetarlo bien.

Introducimos los littleBits.

El movimiento que realizamos al levantar la tapa, será detectado por el littleBits sensor de movimiento, por lo que la luz se encenderá.

Mientras la tapa esté bajada e inmóvil, el cofre permanecerá apagado.
